

PROJECT SYNOPSIS

Project Title: Quiz Application

Submitted By: Nitish Gupta

Project Type: Frontend Web Development Project

Technologies Used: HTML, CSS, JavaScript

1. Introduction

The Quiz Application is a web-based application developed to help users test their knowledge through multiple-choice questions (MCQs). It provides an interactive platform where users can answer questions within a fixed time limit and view their final scores.

The application uses HTML to create the structure, CSS to design the user interface, and JavaScript to implement the quiz functionality.

2. Problem Statement

Traditional quizzes often require manual checking and score calculation. This process can take time and may lead to errors. The Quiz Application provides a simple digital solution that automatically checks answers, calculates scores, and displays results.

3. Objectives

- To develop a simple and user-friendly quiz website.
- To display multiple-choice questions with different answer options.
- To implement a countdown timer for the quiz.
- To calculate and display the user's final score automatically.
- To randomize the order of questions for different quiz attempts.
- To provide an interactive and engaging user experience.

4. Proposed System

The proposed system is a frontend-based web application that allows users to participate in quizzes through a browser. Users can start the quiz, select answers, navigate through questions, and complete the quiz within the given time.

JavaScript manages question randomization, answer validation, timer functionality, and score calculation. After the quiz is completed or the time expires, the application displays the final result.

5. Technologies Used

- **HTML:** Creates the structure of the webpage.

- **CSS:** Provides styling, colors, layouts, and responsive design.
- **JavaScript:** Controls quiz logic, question randomization, timer, and score calculation.
- **Web Browser:** Runs the application.

6. Main Features

1. Multiple-choice questions (MCQs).
2. Countdown timer.
3. Automatic score calculation.
4. Scoreboard displaying the final result.
5. Randomized question order.
6. Simple and interactive user interface.

7. Expected Outcome

The expected outcome is a functional and user-friendly quiz website that allows users to attempt MCQs, manage their time, and view their results instantly. The project will also demonstrate the practical application of frontend web development technologies.

8. Future Scope

In the future, the application can be enhanced by adding user registration, login functionality, multiple quiz categories, difficulty levels, a leaderboard, and a database to store user scores.

9. Conclusion

The Quiz Application is a useful frontend development project that makes online quizzes simple, interactive, and efficient. It demonstrates how HTML, CSS, and JavaScript can be combined to build a functional web application.
